

Blowers

Quiet powerhouses – from vacuum to low-pressure operation

Low-maintenance Kaeser blowers deliver pressurised air quietly and efficiently for a wide range of applications:

1. for pneumatic conveying of bulk materials.
2. in water management – for example for aeration of sedimentation tanks and filter flushing.
3. for the production of blowing and cooling air for industrial purposes.
4. in mobile applications – e.g. mixing, tanker and suction vehicles.

We provide two different concepts to meet your requirements:

1. Rotary lobe blowers with our efficient, three-lobe OMEGA rotors to minimise pulsation effects.
2. Rotary screw blowers with the energy-saving SIGMA profile – designed by KAESER for optimal pressure and output.
